

Areas of Trapezoids, Rhombi, and Kites

1 Areas of Trapezoids In Lesson 6-6, you learned that a *trapezoid* is a quadrilateral with exactly one pair of parallel sides. These parallel sides are called *bases*. The **height of a trapezoid** is the perpendicular distance between its bases.

In the figure below, a translation and rotation of the first trapezoid results in two congruent trapezoids that fit together to form a parallelogram.

KeyConcept Area of a Trapezoid

The area A of a trapezoid is one half the product of the height h and the sum of its bases, b_1 and b_2 .

$$A = \frac{1}{2}h(b_1 + b_2)$$

Real-World Example 1 Area of a Trapezoid

CRAFTS One of Brianna's trapezoid-shaped totes is shown. Find the amount of material used to make the side shown.

$$\begin{aligned} A &= \frac{1}{2}h(b_1 + b_2) && \text{Area of a trapezoid} \\ &= \frac{1}{2}(30)(28 + 58) && h = 30, b_1 = 28, b_2 = 58 \\ &= 1290 && \text{Simplify.} \end{aligned}$$

The tote requires 1290 square centimeters.

Guided Practice

1. AUTOMOBILES Find the area of glass used to make the windshield of a van shown at the right.

$$\begin{aligned} A &= \frac{1}{2}(72 + 85)38 \\ &= \frac{1}{2}(157)38 = 2983 \text{ in}^2 \end{aligned}$$

2 Areas of Rhombi and Kites Recall from Lessons 6-5 and 6-6 that a *rhombus* is a parallelogram with all four sides congruent and a *kite* is a quadrilateral with exactly two pairs of consecutive congruent sides.

KeyConcept Area of a Rhombus or Kite

Words The area A of a rhombus or kite is one half the product of the lengths of its diagonals, d_1 and d_2 .

Symbols $A = \frac{1}{2}d_1d_2$

** Doesn't matter which is d_1 or d_2*

Find the area of each rhombus or kite.

$$\begin{aligned} A &= \frac{1}{2}d_1d_2 \\ &= \frac{1}{2}(8)(15) \\ &= 60 \text{ m}^2 \end{aligned}$$

Area of a kite
 $d_1 = 8$ and $d_2 = 15$
Simplify.

Step 1 Find the length of each diagonal.

Since the diagonals of a rhombus bisect each other, then lengths of the diagonals are $12 + 12$ or 24 feet and $10 + 10$ or 20 feet.

Step 2 Find the area of the rhombus.

$$\begin{aligned} A &= \frac{1}{2}d_1d_2 && \text{Area of a rhombus} \\ &= \frac{1}{2}(24)(20) && d_1 = 24 \text{ and } d_2 = 20 \\ &= 240 \text{ ft}^2 && \text{Simplify.} \end{aligned}$$

Find the area of each rhombus or kite.

$$A = \frac{1}{2}(12)(14) = 84 \text{ mm}^2$$

$$A = \frac{1}{2}9 \cdot 16 = 72 \text{ in}^2$$
